

I believe as citizens we should have the right to listen or purchase services that meet our needs and that these services should not be restricted by the FCC as far as restricting radio content. Satallite radio should have the ability to see and distribute programming that meets their customer's need, weither it be music, sport , local weather or traffic reports. The NAB lobby represents a small portion of the AMerican public and has its own financial well being at mind, not those of the American listening public.

As for myself, I use XM radio daily and use the local weather and traffic information as a safty service. I am an Amature Radio operator (N3TI) and am familure with the FCC guidelines to promote improved public saftey and protection of property. The new XM services of weather and traffic do exactly that. Therefore, it would be my resolve that the FCC reject the NAB's petition 04-160.
